

SUMMARY

Full-Stack Software Engineer and DSA practitioner (CGPA: 9.049, GGSIPU) experienced in production web applications, AI-integrated platforms, REST APIs, technical SEO, and scalable backend systems using React, Next.js, Node.js, TypeScript, Python, MongoDB, SQL, PostgreSQL, and Docker. Built and deployed 7+ full-stack projects and mentored junior developers in a team-lead role.

EDUCATION

B.Tech in Artificial Intelligence and Data Science	CGPA: 9.049
<i>University School of Automation & Robotics, GGSIPU</i>	2023 – 2027
Intermediate (CBSE) 92.4% High School (CBSE) 91%	2022 / 2020
<i>Kendriya Vidyalaya, Muzaffarnagar</i>	

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C/C++, HTML, CSS, Java
DSA: Arrays, Trees, Graphs, Dynamic Programming, Sliding Window, Recursion, Backtracking, Complexity Analysis
Frameworks: React, Next.js, Node.js, Express.js, Redux Toolkit, Tailwind CSS, Bootstrap, FastAPI
Tools / Cloud: Git, GitHub, REST APIs, CI/CD, Docker, Socket.IO, Cloudinary, JWT/NextAuth, Vercel, Cloudflare Workers
Data / AI: OpenCV, EasyOCR, PaddleOCR, Pandas, Multiprocessing, OpenAI API, Prisma ORM
Databases: MongoDB, MySQL, PostgreSQL (Neon), Firebase
SEO: Technical SEO, On-Page SEO, Local SEO, Google Indexing, Sitemaps, Structured Data, Metadata, Open Graph
Coursework: DSA, Operating Systems, OOPs, DBMS, Software Engineering, Theory of Computation

EXPERIENCE

Full Stack Developer (Part-time)	Delhi
<i>IPU IIF</i>	Mar 2025 – Dec 2025
- Engineered and shipped 10+ SEO-friendly features using React, Node.js, TypeScript, SQL, and scalable REST APIs, improving maintainability and accelerating feature delivery. - Collaborated with a 5+ member development team on production code, reusable components, API integration, debugging, refactoring, and deployment workflows.	
Frontend Developer	Remote
<i>SyncAndExplore</i>	Jul 2025 – Aug 2025
Built 8+ responsive, mobile-first interfaces using React and Tailwind CSS, integrating REST APIs for dynamic data rendering and reusable frontend components.	

PROJECTS

Shree Nakshatralok — Astrology Platform	Live Link
<i>Production Next.js platform with technical, local, and Google Search SEO.</i>	
- Fully optimized a Next.js astrology platform across 10+ SEO areas including metadata, Open Graph, XML sitemaps, structured data, canonical URLs, local SEO, Google indexing, favicon, and crawlability; achieved 100/100 SEO and 94/100 Lighthouse Performance with 0 CLS, 0.9s FCP, and 30ms TBT. - Improved frontend performance through render-blocking, image-delivery, and JavaScript optimization, with Lighthouse estimating 410ms render-blocking savings and 53 KiB unused-JavaScript savings.	
Becopy — AI-Powered Coding Platform	GitHub
<i>Full-stack platform with AI code tools, community, and recruiter discovery.</i>	
Built a Next.js, Express.js, MongoDB, and TypeScript platform integrating OpenAI APIs for AI code generation/conversion, JWT/NextAuth, leaderboards, coding quizzes, recruiter discovery, Cloudinary, and Socket.IO real-time features.	
LivingTrustSwarm	GitHub
<i>AI-powered risk assessment platform for B2B travel agencies.</i>	
Architected an AI risk-analysis platform using Next.js, FastAPI, PostgreSQL, WebSockets, and ML integrations with real-time dashboards and swarm-based prediction workflows.	
Paytm-Like Money Transfer App	GitHub
<i>Full-stack payment and wallet management application.</i>	
Implemented atomic deposits, withdrawals, transfers, and transaction history using Next.js and Prisma ORM with race-condition-safe balance updates for concurrent transaction workflows.	
Medium Clone — Click, Code, Create	Live Link
<i>Full-stack blogging platform inspired by Medium.</i>	
Built a full-stack blogging platform using Next.js, Prisma Accelerate, and Neon PostgreSQL, deployed with Vercel and Cloudflare Workers for scalable edge API performance and production hosting.	
FinAgent — Banking AI Platform (SIH Hackathon)	Live Link
<i>AI-powered banking platform with administrative monitoring and backend integration.</i>	
Developed the admin panel for a banking AI platform, integrating backend APIs and replacing mock-data dependencies with live dynamic data while separating static configuration from application data across 7+ core administrative modules.	
Turing Machine Simulator	GitHub
<i>Theory of Computation project — deterministic Turing machine modeling.</i>	
Implemented a configurable deterministic Turing Machine simulator supporting custom tapes, states, transition tables, input strings, and step-by-step execution for automated machine-state validation.	

DSA & COMPETITIVE PROGRAMMING

Solved 250+ DSA problems on LeetCode/GeeksforGeeks covering arrays, trees, graphs, DP, recursion, and backtracking; applied formal time/space complexity analysis to optimize brute-force solutions to $O(n)/O(n \log n)$.

POSITIONS OF RESPONSIBILITY

Co-Lead — Web Development Team	2024 – Present
<i>Arham, GGSIPU</i>	
Mentored 5+ junior developers in React and Node.js, leading code reviews, technical implementation, reusable architecture, and project decisions.
